- 02** Including 20mm packer

- 03** Excluding 20mm packer

- 04** **Never** fix a smaller packer behind a larger packer.

Packers

Warning

- The magnetic element of the YewdaleKestrel® bracket is **powerful**. Handle with care. If attached to a flat steel surface it may be difficult to remove the magnet. **DO NOT PLACE NEAR SENSITIVE ELECTRONIC EQUIPMENT.**
- YewdaleKestrel® products are designed as standalone products only. Care should be taken when assessing or arranging a room to ensure that YewdaleKestrel® products cannot be misused in conjunction with any other item, furniture or fixings in the room.
- It is the responsibility of the end user or client to ensure the product is suitable for the environment it is being installed in. YewdaleKestrel® products must be fitted by a qualified professional with an up to date training certificate and in accordance with the manufacturer's instructions. Failure to do so could jeopardise the product's effectiveness as an anti-ligature system. All installations must be checked and commissioned on completion to ensure the downward forces does not exceed the maximum nor that it is breaking away below the normal force. It is highly recommended that sign off proof that the product is installed and commissioned correctly is issued to the client after installation.

Test Installation

The downward force needed to part the brackets should never be more than 40kg at any point.

O+M Guidance

Items suspended on load-release support systems should be maintained and loadtested in accordance with the manufacturer's instructions on an annual basis. The YewdaleKestrel® system is maintenance-free and its performance remains constant even after repeated use. It is a requirement, however, to carry out a physical inspection and testing of YewdaleKestrel® fittings to identify any possible damage or evidence of tampering and undertake an annual load test. Annual testing should only be carried out by Protects Plus 0345 646 0955.
