shading efficiency

Transmittance is the amount of light and heat transmitted beyond the fabric. The lower the amount, the greater the efficiency.

Block/reflect is the amount of heat and light that is blocked or reflected. The higher the amount, the greater the efficiency.

Absorption is the amount of heat and light absorbed in the fabric. The higher the amount, the lower the efficiency.

Ultraviolet protection illustrates how protective the fabric is against ultraviolet rays. The higher the amount, the greater the effectiveness.

YewdaleDefiant® tara dimout recycled fabric

The YewdaleDefiant® Tara Dimout fabric is made from 100% recycled post-consumer materials that have reached the end of their standard life cycle.

The materials are collected from general waste and polluted oceans, making the fabric highly sustainable. This dimout fabric is designed for areas where privacy and effective light shading are needed. With 7 eye-catching colours, the YewdaleDefiant® Tara Dimout fabric is suitable for most installations.

The low-carbon fabric is fire retardant and resistant to moisture, meaning it can be cleaned with a damp sponge.

YewdaleDefiant® tara blackout white back recycled fabric

YewdaleDefiant® Tara Blackout white back fabric is manufactured using 100% recycled post-consumer materials which were removed from oceans and general waste.

By repurposing this waste, long-lasting plastic is removed from the environment, the lifetime of the raw materials is extended and demand for new fabrics is reduced.

This environmentally friendly fabric provides superior blackout qualities that will cast any room into darkness. It is fire retardant, odourless and colour-fast, with 4 colours available.

Please note that when welding this fabric to create a join, it can only be accomplished via two methods; conventional stitching or ultrasonic bonding.
